

Quicklaw[®] for Microsoft[®] Office: Description and Installation Instructions for the Prerequisite Installer

About the Prerequisite Installer

The Quicklaw for Microsoft Office Prerequisite Installer first checks your system to determine if your current system configuration includes the following required Microsoft components and versions. It also identifies any other Microsoft software that is incompatible with Quicklaw for Microsoft Office.

- Microsoft Visual Studio 2010 Tools for Office Runtime (x86) — Version 10.0.30319
- Microsoft .NET Framework 4 Extended — Version 4.0.30319
- Microsoft .NET Framework 4 Client Profile - version 4.0.30319
- If your system has all the required Microsoft components and versions, the Prerequisite Installer generates a message instructing you to open the Quicklaw for Microsoft Office download site and download the Quicklaw for Microsoft Office software.
- If your system does not have all the required Microsoft components, the Prerequisite Installer automatically installs them for you.

Note: If the Quicklaw for Microsoft Office Prerequisite Installer determines that your current system configuration includes Microsoft components that are incompatible with Quicklaw for Microsoft Office, it prompts you to remove or update those components before proceeding with the installation. If you encounter any persistent errors during this process, contact [Customer Support](#).
