

## You be the judge.

More powerful case analysis with new CaseMap® 10.  
New timesaving features. Even easier to use.

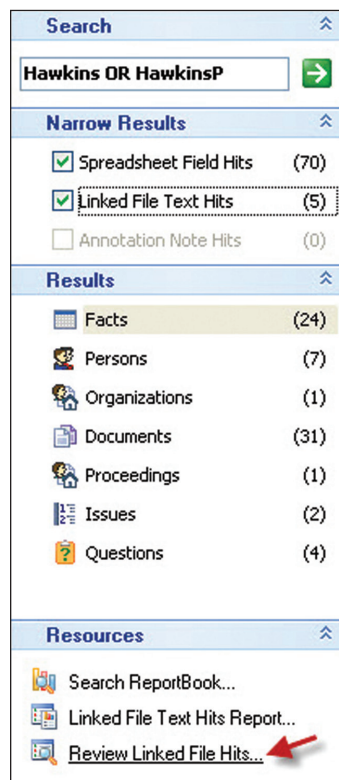

CaseMap® 10 case analysis software – flexible ways to exceed client expectations.

From the beginning of your case to the end, CaseMap 10 software gives you more control. New features help you organize, search and share case information your way – and produce more polished work product to help achieve better outcomes for your clients:

- Comprehensive case-wide searching
- Bulk importing and optical character recognition (OCR)
- Customized spreadsheets
- Enhanced reporting with embedded PDF links
- Microsoft® integration
- Tools for publishing a real-time case portal
- Optional CaseMap DocManager features for document searching, viewing, annotating and printing
- Optional ability to store case data using a Microsoft® SQL Server® database for collaboration across your local-area network (LAN) or Citrix® network

CaseMap also offers:

- Integration with over 30 litigation support and EDD products, as well as LexisNexis Quicklaw with “Send to CaseMap” functionality
- Ongoing innovation and version improvements since 1998
- Phone and email support, online Answer Centre, 1 hr free orientation, and a library of free webinars on-demand

Search your entire case file and then narrow results, as desired.

## Full-text searching

Searching goes well beyond individual spreadsheets. You can search your entire CaseMap file, as well as the attached documents, to quickly find and easily manage facts, key players and hot documents.

## Search Link Assistant

Now it's simpler than ever to search case data for object and issue names. The CaseMap 10 Search Link Assistant automatically searches for links to objects and issues with names that match your search criteria. To gain the most benefit without complicating your searches, use CaseMap short names for linking. This feature is enabled by default, but you can easily turn it off for more precise search control.

## Bulk importing and optical character recognition

Now you can bulk import not only PDFs, but virtually any document type, including Microsoft® Word, email and TIFF files.

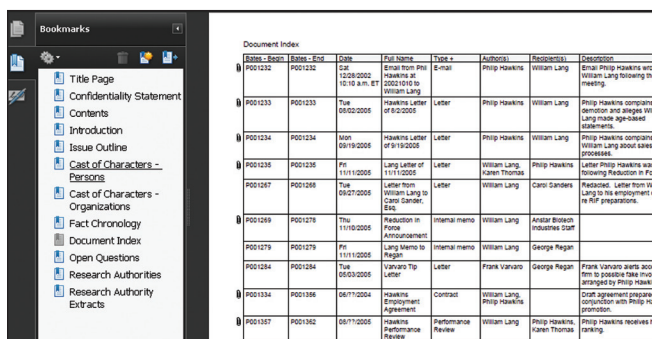

Perform OCR on documents in bulk, and find the underlying text contained in images.

## Customized spreadsheets

Create or rename your sub-Object spreadsheets for a more personalized user experience. You can also move spreadsheets within the list.

## Enhanced reporting

Embed linked documents in our popular PDF ReportBooks for easier fact tracking, information sharing and case analysis.

| State - Begin | State - End | Code           | Full Name   | Type               | Author(s)                    | Recipient(s)                  | Description  |

Having key files embedded in ReportBooks can help you prepare more thoroughly for arbitration and trial.

## Microsoft integration

Seamlessly send work product and case data to CaseMap from within Microsoft Word. Either highlight specific facts to send, or send the full document.

In addition, integration with Microsoft Outlook® is available when you choose the optional CaseMap DocManager feature.

## Tools for real-time collaboration

CaseMap 10 also includes a Microsoft® SharePoint® Web Part, enabling you to view real-time CaseMap data (e.g., spreadsheets) on a collaborative case team or matter Web page. You can grant access to the page for non CaseMap users (e.g., clients or co-counsel). The SharePoint Web Part requires SQL access\*.

## CaseMap 10 with SQL for collaboration across your LAN or via Citrix\*

Litigation teams across your local-area network or Citrix network can use CaseMap 10 with SQL simultaneously to capture, organize and share facts, research and documents.

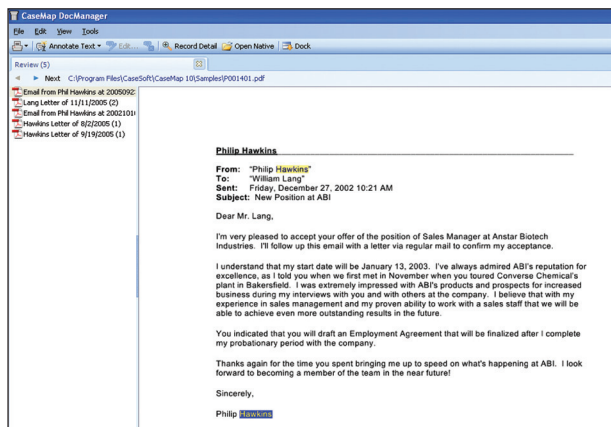

- **Store case data** using a Microsoft® SQL Server® database.
- **Manage cases** in CaseMap 10, as well as CaseMap 9 and TextMap 6, with updated versions of the CaseMap Server and Admin Console.
- **Convert multiple CaseMap Access cases** at once into SQL Server databases.

\*Optional; requires Microsoft® SQL Server®, which may call for database administrative staffing.

## Optional CaseMap DocManager feature

### Enhanced document searching, viewing, annotating and printing

With a near-native viewer supporting most standard file types used in litigation, the add-on CaseMap DocManager feature provides a single interface for you to view, annotate, hit-highlight, Bates stamp, batch print, and batch convert files to PDF and TIFF.

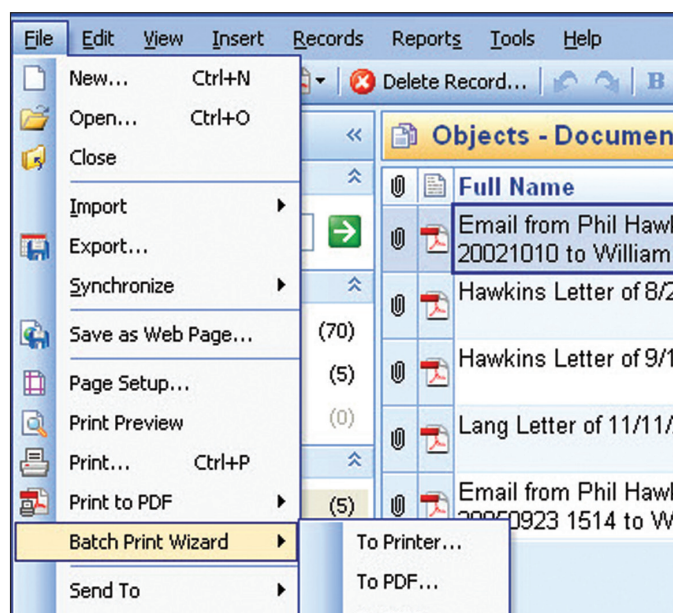

*The CaseMap DocManager displays highlighted search hits.*

CaseMap DocManager also offers a Document Review Pane, enabling you to navigate more easily between search hit documents and keep multiple documents open in the same window.

Additionally, if you click on a different document in CaseMap (e.g., a document from the Facts spreadsheet), this will open in a separate tab so that you can easily toggle between open tabs.

If desired, you can also automatically display linked files in their native applications rather than the CaseMap DocManager file viewer.

*Use CaseMap DocManager to easily generate batch output to print, PDF or TIFF.*
