When you approach case analysis, what do you find most challenging? Bringing facts together from disparate resources? Determining which issues are best supported by the facts? Getting a quick take on progress and next steps?

With LexisNexis® CaseMap® software, you have the proven features customers have long relied on, plus new, customer-requested analysis innovations like a visual dashboard.

CaseMap® is essential for managing facts, documents, persons, evidence, issues, and legal and investigative research from intake through settlement or trial.
Make the best use of key information from day one of a case

CaseMap simplifies organization of your litigation evidence with an easy-to-use, modern interface.

- Gather information from PDFs, Microsoft® Outlook®, Microsoft Word, Lexis Advance® and more while maintaining a record and the ability to link back.
- Organize your witness lists, master-fact chronology and document indices, plus privilege logs, deposition summaries and case issues you’re trying to prove with customizable spreadsheets.
- See the connections you might otherwise miss by tying together the facts, issues, people and evidence.

Modern interface displays favorite features and makes it easy to organize case information

Get an overview of your facts linked to important issues, understand the progress of your case analysis and determine next steps with the visual CaseMap dashboard.

Next, below you’ll see convenient tools and features for organizing, analyzing and reporting on your evidence using CaseMap case analysis software.
Search for links to objects and issues with names that match your search criteria using Search Link Assistant.

Automatically identify persons, places and organizations when creating facts. Object recognition in CaseMap adds value and removes manual entry time and errors.

Easily search individual spreadsheets or search the entire CaseMap file, as well as attached documents, to quickly find and easily manage facts, key players and hot documents.

A guided approach makes it easier to navigate for novices and veterans alike

CaseMap® Smart Assist helps users accomplish tasks, search case data and bridge gaps to find the things you’re looking for. Type in keywords in the search textbox and get results based on functional areas displayed in terms of relevancy of search.

Easily link facts and objects to case issues with the Issue Linking tab.

- Search for links to objects and issues with names that match your search criteria using Search Link Assistant.
- Automatically identify persons, places and organizations when creating facts. Object recognition in CaseMap adds value and removes manual entry time and errors.
• **Bulk import multiple types of documents and images at once**—virtually any document type. Convert images to text using optical character recognition (OCR) on multiple documents to find the underlying text contained in images.

• **Import document metadata** into fields in your case, eliminating manual entry and costly mistakes. Capture metadata for review while you’re improving the process.

• **Eliminate extra steps** by running Lexis Advance searches right from CaseMap Smart Assist for greater case insight and fact finding.

![CaseMap Smart Assist integration](image)

• ** Seamlessly send work product, case data and emails** to CaseMap software from Microsoft software and other tools. Either highlight specific facts to send, or send the full document.

![Get strategic insights from visualization and reporting tools](image)

See the facts in your case and analyze how your case is developing with the unique and illuminating **Fact Card** view. This view organizes all the facts as they stack up in favor or against your case.

**Fact Card uncategorized**

A variety of convenient reporting options quickly pull together the information needed for different situations, including:

• By issue

• Summary judgment

• CaseMap® ReportBooks®

... and more.
In the course of organizing your case, you can add files to specific fields in your object spreadsheets. Then you can easily embed those linked documents in CaseMap ReportBooks PDFs for easier fact tracking, information sharing and case analysis.

**Having key files embedded in ReportBooks gives quick access to related references in the report, making it easier to prepare thoroughly for arbitration and trial.**

**Connect with colleagues and clients in real time**

A Microsoft® SharePoint® web part enables users to view real-time CaseMap data (e.g., spreadsheets) on a collaborative case team or matter web page.

Administrative users can grant access to the page for non CaseMap users (e.g., clients or co-counsel). The SharePoint web part requires SQL Server® access.*

Administration software that can be deployed in an SQL environment is available for customers who want to have CaseMap data centrally stored and managed rather than sitting on individual desktops.

**CaseMap® DocManager provides advanced searching, viewing, annotating and printing**

With a near-native viewer supporting most standard file types used in litigation, the CaseMap® DocManager feature provides a single interface for you to view, annotate, highlight, Bates stamp, batch print and batch convert files to PDF and TIFF. You can also use the Find button to easily search for terms with hit-highlighting shown in your document.

*The CaseMap DocManager feature displays highlighted search hits.*
CaseMap DocManager offers a document review pane, allowing easy navigation between search hit documents and keeping multiple documents open in the same window. Clicking on a different document in CaseMap (e.g., a document from the facts spreadsheet) opens in a separate tab so you can easily toggle between open tabs.

With DocManager, you can:

- Redact sensitive information within a document by selecting the text, or by using **Find & Redact**
- Easily create production sets from case documents
- Quickly find the information you need with hit-highlight capability

![Image of a document with redacted text]

*Improve productivity with Find & Redact.*

**It all works together**

Integration between CaseMap®, TextMap®, TimeMap® and Sanction® software makes all case information easily accessible and immensely useful.
